Take Control...

Retrofit Kit SMART IN 15 MINUTES

AOne™ is a retrofit smart lighting, control and sensing platform that can be installed in minutes and controlled from anywhere in the world!

Aurora's new AOne kit spells the end for complicated and expensive lighting control systems. The dimmers can be installed inline between the switch and first light, or individually in a matter of minutes meaning there's no extra wiring required. Connect and configure the AOne kit on your device, then simply hand over configuration to the user via email.

1 Connect Hub to router

2 Plug in power supply

3 Download AOne App
